

Your Postgres. Faster on Metal

Cloud Postgres on local NVMe.
Operated by PlanetScale.

Unlimited IOPS

Local NVMe storage

Room to grow

Horizontal scale with Neki

Vitalize: 2 ms p95 Half the vCPUs

Hospital staffing software

400 GB / 150 million rows

Supabase → PlanetScale Metal

PlanetScale / after migration

Compute / vCPU

Your Postgres. Operated by PlanetScale

99.99%

single-region HA SLA

 Cash App

Vitess / MySQL

~400 TiB

data

3-4M

peak queries / second

More throughput. Lower p99 on Metal

Throughput

mean queries / second

p99 latency

milliseconds / 1-second intervals

Postgres + local NVMe

TPCC-like / 500 GB / 32 connections / 5-minute run

Postgres beyond a single machine

[NEKI]

118.5M queries / second

[NEKI]

Read-only point selects / Primary-only shards

1.22 PiB
data

512
shards

6.06 ms
router p99

Your migration. Our infrastructure team

01 Assess

Schema, extensions, workload

02 Rehearse

Replication, p95 / p99, recovery

03 Cut over

Validate, switch, monitor

Technical discovery + migration assessment

Your team + our database engineers
